## Supplementary materials

## Inter-group comparison of decline patterns within the T2DM patients and HCs

## Method

To exclude the possible influence of the baseline level on the results of the study, for each ROI,
$\Delta \mathrm{r}$ of the $\mathrm{mReHO} / \mathrm{mCBF}$ ratio were further calculated. Inter-group comparison of decline patterns within the T2DM patients and HCs were performed by using the two samples $t$-tests with Bonferroni correction for multiple comparisons ( $P<0.05$ ).

## Result

A significant difference in $\Delta r$ of the $\mathrm{mReHO} / \mathrm{mCBF}$ ratio was found in the ROI of the left insula
$(t=3.363, P=0.001$, Bonferroni corrected) between the T2DM patients and the HCs group. No significant inter-group difference was observed in the other three clusters (Supplementary materials Table S1).

Table S1 Between-group comparison of changing rate of $\mathrm{mReHo} / \mathrm{mCBF}$ ratio in four clusters with significant longitudinal changes in type 2 diabetic patients (Mean $\pm$ SD).

| Brain region | Patient | HC | $\boldsymbol{t}$ | $\boldsymbol{P}$ |
| :--- | :---: | :---: | :---: | :---: |
| Left insula | $-0.174 \pm 0.149$ | $0.039 \pm 0.338$ | 3.363 | $\mathbf{0 . 0 0 1 *}$ |
| Left post-central gyrus | $-0.158 \pm 0.238$ | $-0.143 \pm 0.261$ | 0.227 | 0.821 |
|  |  |  |  |  |
| Right rolandic operculum | $-0.174 \pm 0.144$ | $-0.056 \pm 0.304$ | 2.052 | 0.045 |
| Right pre-central gyrus | $-0.164 \pm 0.132$ | $-0.067 \pm 0.272$ | 1.857 | 0.069 |

Two sample $t$-test for normally distributed continuous data (means $\pm$ SD).

* Significance after Bonferroni-correction ( $p<0.05 / 4$ ).
