

Supplemental Figure 1

Supplemental Figure 1. Effects of systemic tofogliflozin administration on food intake, water intake, and body weight

Tofogliflozin (0.52 μmol) was injected intraperitoneally, and food and water intake, and body weight changes were measured at 1.5, 3, 6, and 24 h after the injection. A: Cumulative food intake after tofogliflozin injection B: Cumulative water intake after tofogliflozin injection C: Body weight change after tofogliflozin injection Data are presented as the mean \pm SD. V: vehicle, T: tofogliflozin A–C (V, T) $n = 7$ and 8 , respectively.
