

Supplementary Table 1. Associations of maternal antenatal 2 hours glucose concentrations with offspring adiposity measured by sum of skinfolds and BMI-z scores, in non-obese mothers.

Age (months)	Sum of skinfolds Adjusted ^a B (95% CI)	BMI z-scores Adjusted ^b B (95% CI)
18	-0.77 (-0.46 to 0.30)	-0.05 (-0.18 to 0.07)
24	0.00 (-0.03 to 0.03)	-0.06 (-0.21 to 0.09)
36	0.33 (-0.23 to 0.89)	0.11 (-0.05 to 0.27)
48	0.52 (-0.18 to 1.21)	0.11 (-0.06 to 0.27)
54	0.48 (-0.26 to 1.23)	0.09 (-0.06 to 0.24)
60	0.45 (-0.46 to 1.37)	0.10 (-0.07 to 0.26)

^aAdjusted for ethnicity, sex of child, maternal age, maternal education, 26 weeks depression score, maternal BMI and child's age at visit.

^bAdjusted for ethnicity, maternal age, maternal education, 26 weeks depression score and maternal BMI.
