#### **Appendix C: Medication category**

- 1. Anti-hyperglycemia
  - 1.1. Oral medication
    - 1.1.1.Alpha-Glucosidase Inhibitors: Acarbose, Miglitol
    - 1.1.2.Biguanides: Metformin
    - 1.1.3.DPP-4: Alogliptin, Linagliptin, Saxagliptin, Sitagliptin
    - 1.1.4. Glucagon-Like Peptides: Albiglutide, Dulaglutide, Exenatide, Liraglutide
    - 1.1.5. Meglitinides: Nateglinide, Repaglinide
    - 1.1.6.SGLT2 Inhibitors: Dapagliflozin, Canagliflozin, Empagliflozin
    - 1.1.7.Sulfonylureas: Glimepiride, Gliclazide, Glipizide, Glyburide, Chlorpropamide, Tolazamide, Tolbutamide
    - 1.1.8. Thiazolidinediones: Rosiglitazone, Pioglitazone
  - 1.2. Insulin
    - 1.2.1.Short-acting: Regular (R)
    - 1.2.2.Rapid-acting: Insulin aspart, Insulin glulisine, Insulin lispro
    - 1.2.3.Intermediate-acting: Insulin isophane
    - 1.2.4.Long-acting: Insulin detemir, Insulin glargine

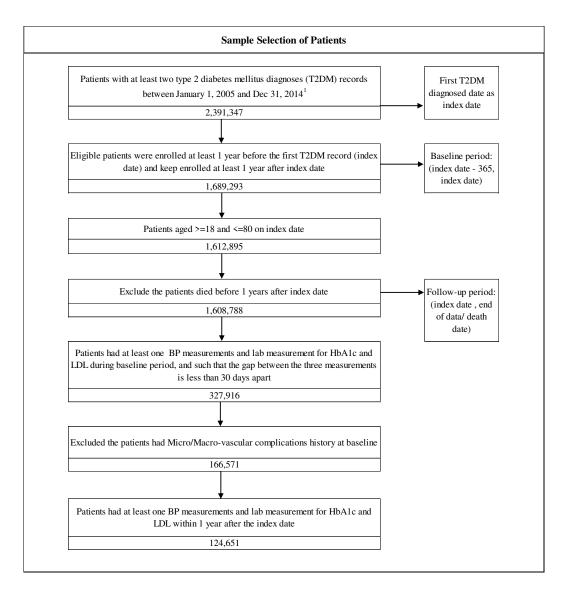

### 2. Anti-Hypertension

- 2.1. Diuretics:
  - 2.1.1.Diuretics: Chlorthalidone, Chlorothiazide, Furosemide, Hydrochlorothiazide, Indapamide, Metolazone
  - 2.1.2.Potassium-sparing diuretics: Amiloride hydrochloride, Spironolactone, Triamterene
  - 2.1.3.Loop diuretic: Bumetanide
- 2.2. Beta-blocker: Acebutolol, Atenolol ,Betaxolol, Bisoprolol fumarate, Carteolol hydrochloride, Metoprolol tartrate, Metoprolol succinate, Nadolol, Penbutolol

sulfate, Penbutolol sulfate, Pindolol, Propranolol hydrochloride, Solotol hydrochloride, Timolol maleate

- 2.3. ACE inhibitors: Benazepril hydrochloride, Captopril, Enalapril maleate, Fosinopril sodium, Lisinopril, Moexipril, Perindopril, Quinapril hydrochloride, Ramipril, Trandolapril
- 2.4. Angiotensin II receptor blockers: Candesartan, Eprosartan mesylate, Irbesarten, Losartan potassium, Telmisartan, Valsartan
- 2.5. Calcium channel blockers: Amlodipine besylate, Bepridil, Diltiazem hydrochloride, Felodipine, Isradipine, Nicardipine, Nifedipine, Nisoldipine, Verapamil hydrochloride
- 2.6. Alpha blockers: Doxazosin mesylate, Prazosin hydrochloride, Terazosin hydrochloride
- 2.7. Alpha-2 Receptor Agonist: Methyldopa
- 2.8. Central agonists: Alpha methyldopa, Clonidine hydrochloride, Guanabenz acetate, Guanfacine hydrochloride
- 2.9. Peripheral adrenergic inhibitors: Guanadrel, Guanethidine monosulfate, Reserpine
- 2.10. Blood vessel dilators (vasodilators): Hydralazine hydrocholoride, Minoxidil
- 3. Lipid Lowering Medication
  - 3.1. Statins: Atorvastatin, Fluvastatin, Pravastatin, Rosuvastatin Calcium, Simvastatin
  - 3.2. Niacin: Omega-3 Fatty Acid Ethyl Esters, Marine-Derived Omega-3 Polyunsaturated Fatty Acids
  - 3.3. Bile-acid resins: Cholestyramine, Colestipol, Colesevelam Hcl
  - 3.4. Fibric acid derivatives: Gemfibrozil, Fenofibrate, Clofibrate
  - 3.5. Cholesterol absorption inhibitors

## Appendix F: Medication usage and Prevalence of Clinical Outcomes in follow-up period

#### Medication usage

In the follow-up period, 21.48% of patients (27,462) were identified as insulin users and the average percentage of coverage was 77.85%, while 74.19% (98,662) used at least one oral anti-diabetic medication. 85.13% (113,224) of patients had received anti-hypertension medication and 80.75% (107,390) had had lipid lowering drugs.

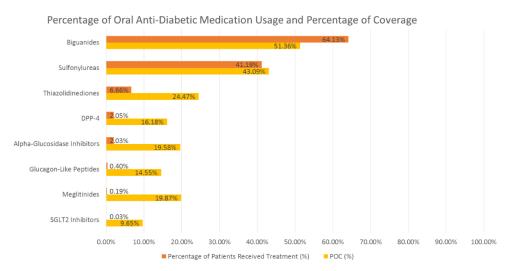

### $(Figure \ 1)$

This figure (**Figure 2**) was shown the ranking the oral anti-diabetic medication use rate. The biguanides was most widely used (64.13%) and patients who received biguanides were covered 51.35% time of follow-up period averagely. Sulfonylureas and thiazolidinedione were the second and third frequently used anti-diabetic medications. 41.19% and 6.66% of patients were prescribed and covered 43.09% and 24.47% of follow-up period respectively. Only about 2% patients used DDP-4 and Alpha-Glucosidase Inhibitors, while the less than 1% patients were prescribed Glucagon-Like Peptides agonists, meglitinides and SGLT2 Inhibitors.

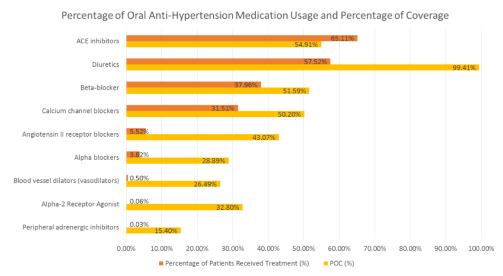

BMJ Open Diab Res Care

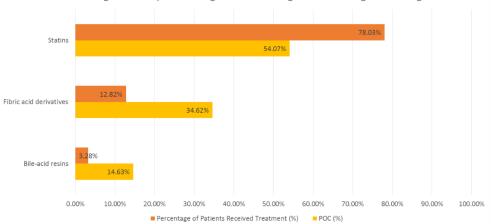

ACE Inhibitors, Diuretics, Beta-blocker and Calcium channel blockers were top 4 most frequently used anti-hypertension medications, which were used among 65.11%, 57.52%, 37.96% and 31.51% respectively. The percentage of coverage of patients who have ever been prescribed Diuretics reached 99.41%, while all the other three drug were between 50.20% and 54.91%. Small percentage of patients used Angiotensin II receptor blockers or Alpha blockers, which were 5.52% and 3.82% respectively. And less than 1% patients were prescribed blood vessel dilators, Alpha-2 receptor agonist and or peripheral adrenergic inhibitors (0.50%, 0.06%, and 0.03% respectively). (**Figure 3**)

78.03% of patients used statins and the treatment covered 54.07% of follow-up period. And 12.82% and 3.28% of patients used fabric acid derivatives and bile-acid resins as lipid lowering medication and were covered by the treatment 34.62% and 14.63% time of whole follow-up period respectively. (Figure 4)

### **Prevalence of Clinical Outcomes**

Out of total 124,651 patients, 43,890 (35.21%) patients had at least one microvascular complication during the follow-up period, which included 12,615 (10.12%) retinopathy, 8,863 (7.11%) nephropathy, and 32,833 (26.34%) neuropathy. 10.68% of patients had the first diagnosis of microvascular complication at the first year after index date, while 6.34% happened at second year, 4.66% at third year, and 13.54% happened after 3-year of post-index.

Out of 124,651 patients, 40,798 (32.73%) patients had at least one macrovascular complication during the follow-up period, which included 25,504 (20.46%) patients with CAD, 13,138(10.54%) patients with cerebrovascular disease, 12,066 (9.68%) patients with PVD, and 8239 (6.61%) AAE. 10.78% of total patients had the first diagnosis of macrovascular complication at the first year after index date, while 5.55% happened at second year, 4.17% at third year, and 12.24% happened after 3- year of post-index.

During the whole follow-up period, 22,524 patients died (18.07%). Patients died at the first year of post-index have been excluded from this study. 2456 (1.97%) patients were found died at the second year after index date, while 2630 (2.11%) death occurred at the third year of post-index, and 17,439 (13.99%) patients died after three years of post-index. (**Table 1**)
